

## Biochemistry and Molecular Biology Regression List

Regression occurs when a student takes a lower-level or prerequisite course after having satisfactorily completed a more advanced course in the same or related subject. Hours earned by regression do not count toward the total number of hours required for graduation. Regression is identified only at the time of final graduation analysis.

Biochemistry and Molecular Biology considers it regression if BMB:3110 is taken **after** BMB:3120 or 3130. This is the only case of regression in the courses offered by Biochemistry and Molecular Biology.
